

Dear students,

I'm happy to welcome you in G30 courses!

And I'm sure the experience will open many new doors for you - new friends, new perspectives to the world and new ideas.

If you are worried you will not be able to fit in - try it anyway! We often underestimate our own abilities.

Treat it as a challenge, an adventure, and focus on what you CAN do. You will be surprised how much you actually can understand and do.

Quick info about the Biology courses I'm teaching this semester.

The following notes are just my recommendations. Students without biology background are most welcome to come and try any of the courses.

1. Special Lectures in Biology 5 and 6 - courses specially designed for Japanese students; the best match to students who have no biology background
2. Cell Biology 1 - introductory content that is relatively easy to follow even for non-Biology majors
3. Cell Biology 2 - specialized content, would recommend to have biology background
4. Genetics 1 - specialized content, biology background is highly recommended
5. Physiology and Anatomy 1 - specialized content, would recommend it to medicine/health students

Looking forward to seeing you in class!

Prof. Vassileva
