

MESSAGE FROM THE INSTRUCTOR

ORGANIC CHEMISTRY 2

SHIN, Ji-Young

This course was designed to promote an understanding systematic features and the corresponding chemistries on unsaturated organic molecules containing either multiple bonds or π -electron conjugations. Our class size is small enough to have precise intercommunications between students and the course instructor.

Three exams (two midterms and a final) will be prepared for the evaluation of course lessons, and every student will get a personal lesson for reviewing the exams to build concrete knowledge of the course contents.
